

# Green Medical

A High Fund **Capital** project

**GREEN PAPER**

## Investments in Cannabis

### Introduction

# Make the impossible possible, simple, easy, affordable and decentralized

We are pleased to announce the first decentralized project of High Fund Capital, **Green Medical**, which will allow you to approach the world of medical cannabis as an investor in an affordable and completely anonymous way.

High Fund Capital will use the capital raised from the sale of NTT's to the expansion, development of plantations and companies in the world of cannabis, in exchange for a future return (agreed in advance) that will allow large rewards to be distributed.

### **NEWTON**

Co-Founder

# About the project

It is no secret that we are still facing something very young and rejected by much of today's international politics, but that only means one thing: **Opportunity** to make money.

For this reason, we have decided to take advantage of the fact that we are at the beginning of what will be a massive adoption at an international level, to create a token based in medical cannabis, that grants utility in the real world with such high potential and that rewards as no other asset in the world.

## International News

# The medical cannabis market is growing at a CAGR of 24.5%

According to data analyzed by Data Bridge Market Research, this market is expected to reach USD 19,153.13 million by 2028.

## Derived from Cannabis

The cannabis derivative CBD already moves 2,000 million dollars in the US: Nestlé joins this fever and it is expected to reach 20,000 million in 2025, according to the specialist cannabis consultant BDSA.

## New Agreements

One of the world's largest health and nutrition multinationals, Royal DSM, for example, has led a \$32 million funding round into Brains Bioceutical, a firm that produces CBD for pharmaceutical use. Similarly, British American Tobacco, for its part, has led a \$25 million investment in Trait Biosciences, a technology startup that is studying how to introduce this component into food and beverages. It has also invested \$75 million in Organigram, a company from Canada, the main producing country in the world. This operation will allow you to distribute CBD-derived products throughout the United States.

## Costa Rica legalizes the production and consumption of medicinal cannabis

Costa Rica finally approved the law that regulates the production, industrialization and commercialization of hemp and medicinal cannabis after a long debate between Congress and the Government. The measure, applauded by patients, is also expected to contribute to the economic reactivation of the country.

## Main fundamentals of the project

- **Mission:** Our goal is to facilitate access to the cannabis world through cryptography.
- **Vision:** We envision a world where investing is fun, accessible and seamlessly integrated into everyday life, contributing to a society that is more open to the world of cannabis.
- **Values:** We accept that each investor is different, and we also take into account the purchasing power of each one of them, the personality, the objectives and the preferences of our clients. Integrity, innovation and collaboration are among our main values.

Why Green Medical?

**A new and revolutionary form of utility for this wonderful world that is the blockchain with **minimal** risk**

**Attention:**

We know from experience that safe investments do not exist in this life, but we also know that there are some with minimal risk, and this opportunity is one of those.

*Return of investment guaranteed*

*Compound interest when betting long term*

*Profit every 4 months*

*Exclusivity*

# A green future

Every year the number of countries where the use of cannabis is legal is increasing, with **more than 40 countries currently allowing medical use**. Knowing this little data that we have been offering you through the greenpaper, are you beginning to understand why we should invest in this sector?

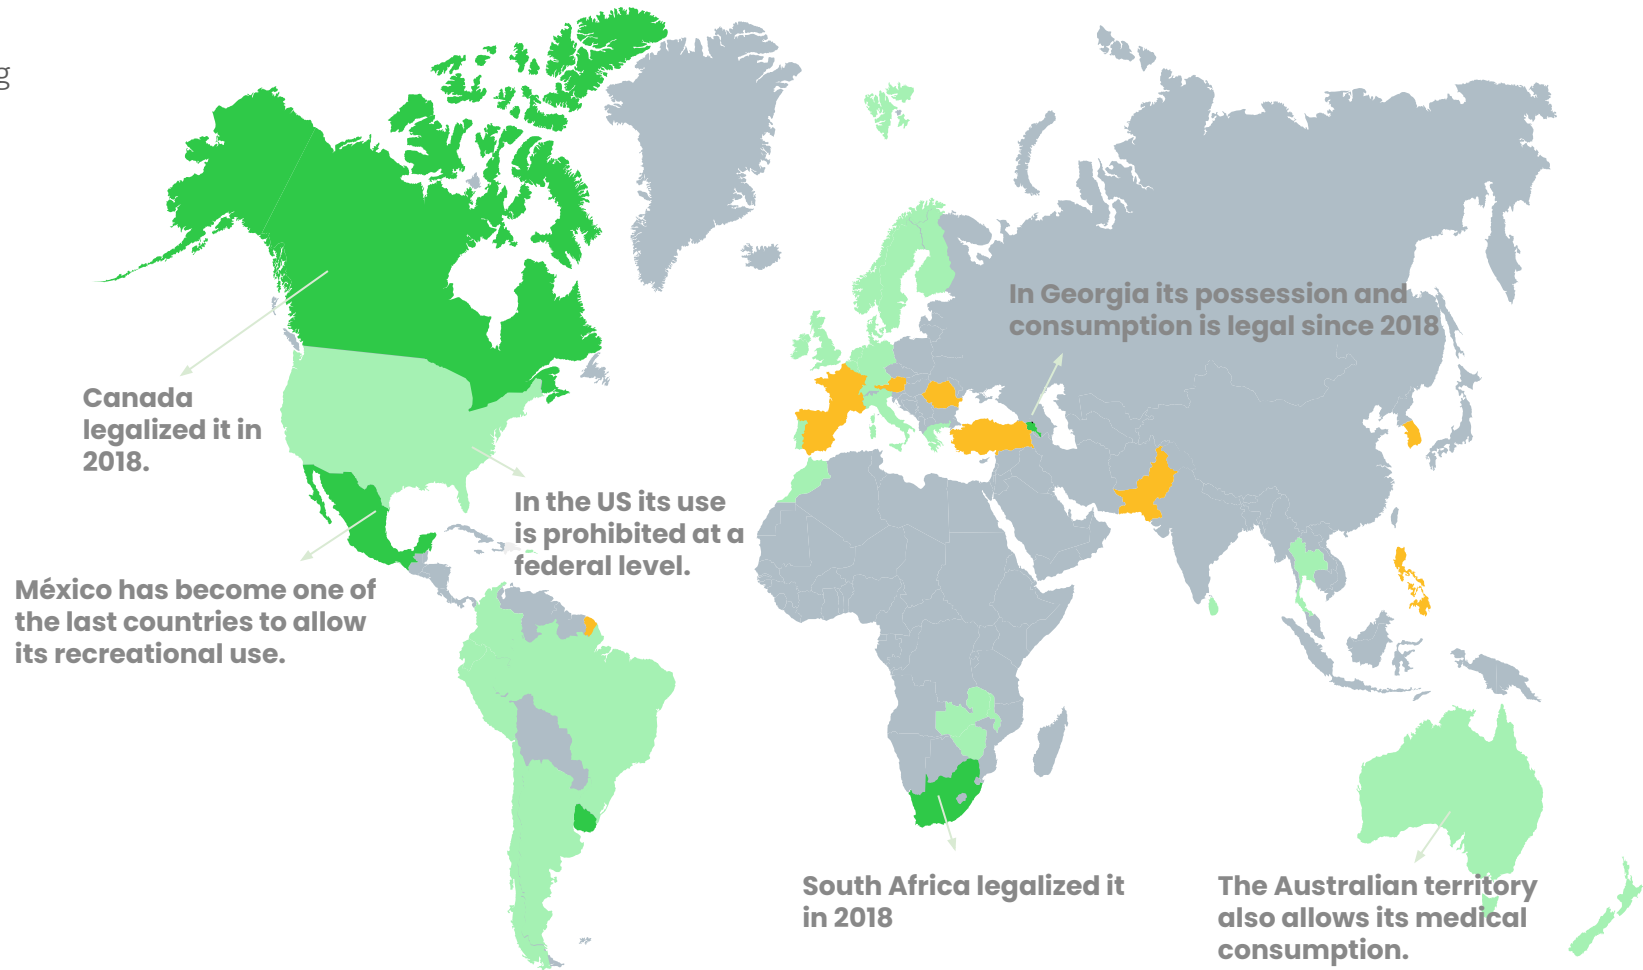

I'll give you a hint that you should have seen at the very beginning:

**Medical use  
and recreational  
legal**

**Medical use  
legal**

**Medical use  
legal in very specific  
cases**

Token used in Green Medical

## What is a NTT?

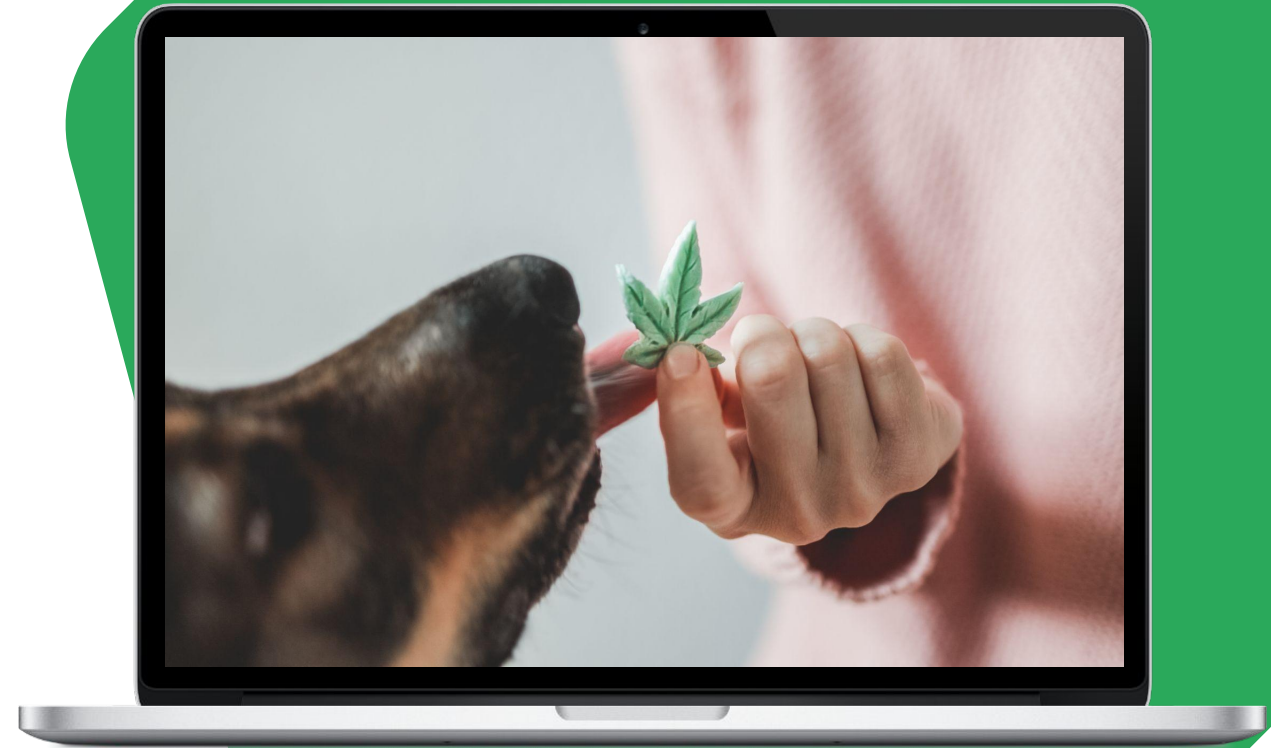

### Token NTT

Own real life value in the crypto world thanks to NTTs

Until now, the most used tokens (NFT and FT) had the common characteristic that they could change owners, either through direct transmission between users or through trading in a market.

This is not possible with a NTT token. This type of token, once created by its author and delivered to its owner, can no longer be transferred to another owner or sold on a market.

This type of token can be used to distribute user licenses or products that are not intended to be resold.

# How the platform works

## ANALYZE

Analyze the different exclusive NTT collections that we offer on our platform

## BUY

Acquire the NTT that best suits your needs and observe the different yields that it will give you over time

## HOLD

Sit back and enjoy watching your NTT increase in value over time as you receive USDT rewards. All this with the peace of mind of knowing that your investment will never decay

## SELL...?

Once any of our investment cycles is over, you can decide if you prefer to reinvest the NTT or sell it with its increase in acquired value

# Yields + Tokenomics

The NTT's, as they do not fluctuate in price, will always be bought and sold directly from our contract **for the same acquisition price + the interest that your token has generated when it is revalued by HOLDING.**

The sale of the NTT will have a decreasing tax according to the sales cycle (see page 11).

Percentages shown indicate **ROI** per cycle(33%)

Marketing

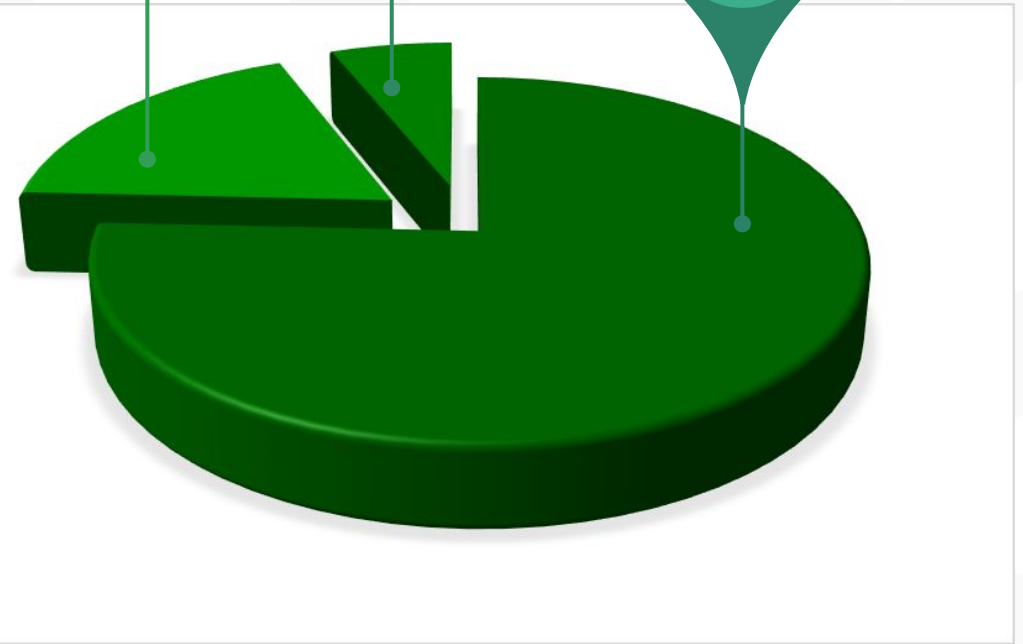

6%

Team

2%

Rewards

25%

It is obvious that there will be much more advantageous collections than others depending on your interests, so you have to play your cards right when allocating your capital.

**It all depends on your criteria and patience when accepting your investment.**

# Tokenomics

## Theory

**What better than an example to demonstrate the mechanism of Green Medical.**

**1 NFT with 4-month cycles will guarantee a quarterly return of 33%.**

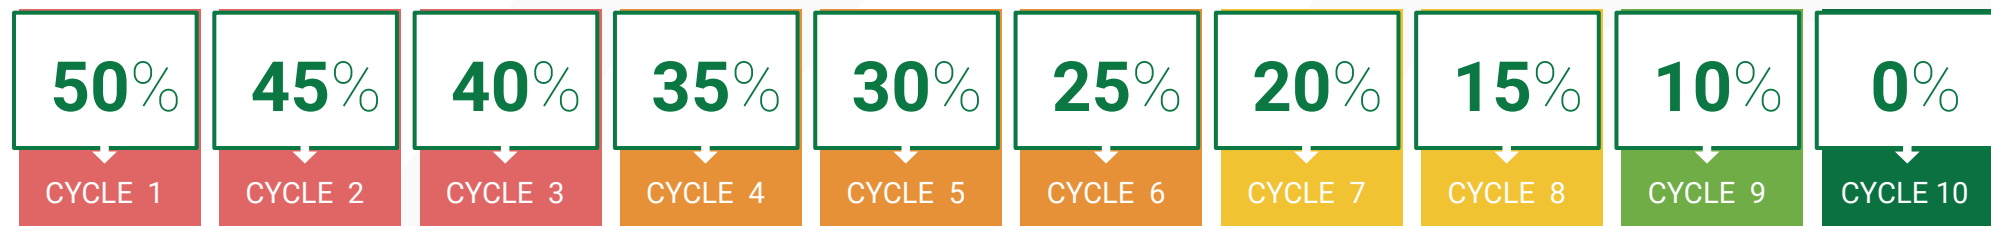

**25% will be destined for the HOLDERS**, paying **17% in USDT** and the other **8% giving greater value to the NTT and generating compound interest**, having the advantage of receiving higher returns in each cycle and making it really beneficial for people who are willing to HOLD long term.

There will be a **percentage of what has been agreed with our partners (2%)**, which will go to the team's wallet and 6% to marketing

**NTTs will have a fixed "limit value"**, (regardless of the price of the NTT and the collection to which it belongs) reaching its goal in the tenth cycle. When that moment comes, the NTT will automatically sell and receive the entire revaluation in USDT.

**The only variable tax that is written in the contracts is a decreasing percentage on the sale of the NTT**, which will only affect the revaluation of the token, this means that you will **only be charged a tax on the increase in value of the token** and your initial investment always will be guaranteed. So the longer you **HOLD** before selling your NTT's, less taxes the contract will charge. If you add to this that your NTT will be worth more with each cycle that finishes... are you really not going to **HOLD**?

## Sales Tax

# Summary of tokenomics

## Team

2% of the ROI will be used to pay the team and 6% for marketing

## Community

Community led voting.

## Revaluation of the NTT

The NTT will appreciate in value thanks to the rewards and the compound interest made in each cycle(8%).

## Rewards

25% of the ROI will go to the HOLDERS, granting 17% in USDT and another 8% increasing the value of the NTT in possession for the following cycles.

## Purchase tax

When buying the NTT, a 5% tax will be charged, which will go to the marketing wallet.

## Sales tax

When selling the NTT, a tax will be charged based on the net profits that it has accumulated (see page 11). This tax will go to marketing wallet.

Reality or fiction

**From experience, we know that investors generally end up losing money**

**That won't happen in Green Medical**

Here you will be rewarded for your time with us, so that you never again have to depend on external factors or luck, as in the rest of DeFi projects.

*Rugpulls*

*Bots*

*Whales*

*Bear Markets*

# Are you sure you're not lying to us?

Well, a thousand and one misfortunes can happen, such as the brands we deal with suffering mishaps with their finances or final products, natural catastrophes, disappearance of the raw material due to smoking it all and a long, very long, etc, etc...

**But rest assured that we will do everything possible to anticipate these situations, and in the event that they arise, minimize the damage as much as possible.**

# Roadmap

First steps

## IDEA

01

### First phase Q1-2022

Birth of High Fund Capital, a decentralized fund that seeks to generate passive income with real life values.

First bet, **Green Medical**, investments in medical cannabis.

Search for competitors, market research and possible investment partners and suppliers to start.

## CONCEPT

02

### Second phase Q1-2022

Continuation of the project idea, laying the foundations to apply for the creation of the protocol.

Definition of the design, characteristics and target market.

Beginning of the development of the platform along with the designs of the first NTTs.

## TESTS

03

### Third Phase Q2-2022

Compliance, durability, functionality and quality tests of the developed platform.

Brand creation, promotional campaign plan, final agreements with the first investors and suppliers of medical cannabis.

## LAUNCH

04

### Last phase Q3-2022

Final optimization of the platform.

Marketing campaign launch.

Exclusive and retail sale of the first NTTs.

Creation of new projects and redefinition of the roadmap.

# About the team

The team is made up of a group of veteran investors in the crypto world, with extensive experience both in the DeFi world and in traditional investments, many of them involved in the cannabis sector.

We have a financial advisor, programmers with high experience in blockchain, authentic international marketing and public relations geniuses, as well as several surprises that you will discover over time.

Each and every one of us with immeasurable ambitions.

**The horizon is green, in every aspect.**
